Notes and Definitions

As the Gaming Control Board defines it, a “card game” is poker, pan, or gin rummy—games in which the house takes a rake from each pot, rather than accepts bets directly from the player..

Rooms refers to separate locations with poker, *tables* is the number of games licensed as of December 13 of the year in question, and *revenue* is the total reported revenues for the year. *% change* is the percentage change from the previous year’s revenue total. Revenues are in thousands of dollars; add \$ 000 for true totals.
